Meaning of some concepts
In teacher guide

- The general aims :
  - (1) Gain the earlier mathematical abilities
  - (2) Develop the basic mathematical skills
  - (3) Increase the mathematical enjoyment
- Maths pamphlet (Student book) :
  is a good resource for students evaluation
- The content : is what students discovering or learning it
- The evaluation : is what teacher discovering it about pupils
- Update of ideas : change the ways continuously that adapt to different ability of pupils
- Planning : is what helping for achieve more success in processing operation
- Correction maths : by this activity the student can develop their knowledge about numbers, place value
- concepts, fluently counting and problems solving skills
- Sharing : by this activity the student can explain what he understand of maths
- Using digital resources that is found in (Egyptian knowledge bank)
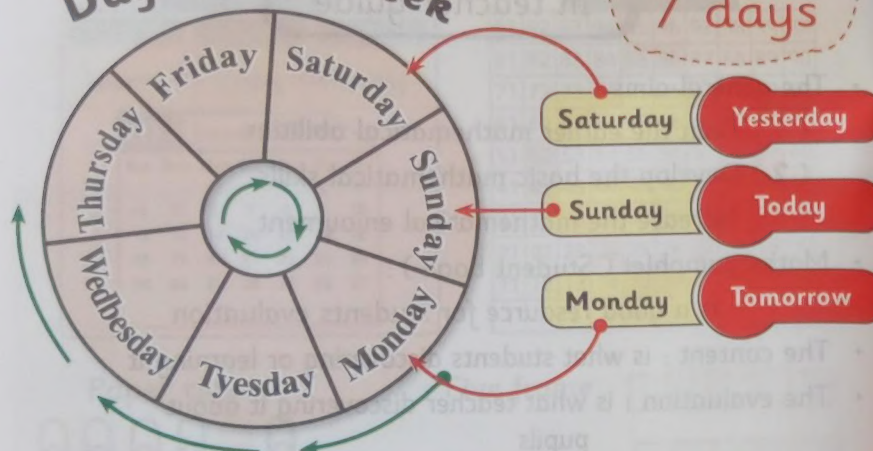

as a way to grow the education level

Kindergarten 1 - Term 1

Key Area: Movement & Motor Skills

The Development Of Appropriate
Pencil Grip

When children first begin to draw using crayons, pencils or brushes they use a dagger grasp. In a natural developmental sequence they will hold the writing implement in a variety of grasps until they settle on a functional tripod grip for handwriting. The developmental sequence is a result of neurological and physical growth in the child.

As we look below at the development of different grasps and drawing skills we can observe that there is a natural progression as the child's fine motor skills develop. The complexity of the drawing skills increases as the child develops more control over the pencil or crayon in his or her hand.
| 12 Months to 2 Years | Development of fine pinch grip and precise release of small objects
Both hands develop skilled function and work together
Crayon is held initially in the palm (*Palmar Supinate* or *Dagger grasp pictured right*).
Movement mainly occurs from shoulder, the arm and hand move as a unit.
Makes marks on paper with crayon
Vigorous scribble in imitation
Scribbles spontaneously
Draws a stroke then obliterates by scribbling
Imitates drawing a vertical line | Dagger |
2 Years To 3 Years	Crayon or tools may be held across all fingers, with the palm facing down. *Digital Pronate grasp (pictured right)* movement mainly occurs at the elbow, the forearm and hand move as a unit. Imitates drawing a circle Copies a horizontal line Copies a vertical line Draws 2 or more strokes when attempting to copy a cross	Pronate
3 Years To 4 Years	The fingers (often all four) are held on the pencil shaft opposite the thumb. *Quadropod grasp (pictured top right)*. Movement can occur from the wrist, the hand moves as a unit with the fingers static. *Static Tripod grasp (pictured bottom right)*. Adjustments to the pencil are made with the opposite hand (3½ - 4 years). Copies a circle Imitates a horizontal cross Imitates a zig zag line Joins two dots Draws a diagonal stroke by following a continuous dotted line Traces over a diamond shape (rounded corners) Draws a man with a head and one other body part e.g. arms, legs Traces and stays on most of the time a 7cm wide horizontal line.	Quadropod Static Tripod
4 Years To 6 Years	Child developing ability to manipulate objects between the fingers and palm and rotate objects with the fingers. Uses a *Static Tripod grasp (pictured right)* of a pencil consistently Developing fine control to manipulate a pencil The thumb, index and middle fingers work as a unit for precise control of the pencil, the ring and little fingers provide support. Horizontal movement across the page occurs at the wrist elbow and shoulder (4½ to 6 years). Copies a diagonal line, a square, a diagonal cross, circle and triangle Draws a man with a head, arms and legs Colours in a simple picture staying mainly within the lines (no more than 0.6 cm) Draws a man with a head, trunk, arms, legs, feet and three facial features Connects a series of dots to make a simple drawing	Static Tripod
